Sebastian Quintana Warsop

Tier 2 IT Support Engineer · Microsoft 365 & Security

sbrqw01@gmail.com UK · Remote linkedin.com/in/seb-qw-b14b28365 sebqw.github.io/webdevjourney

PROFILE

IT support engineer with seven years in technical support, including three and a half at a managed service provider, where I was promoted from RMM Analyst to Tier 2 in 2025. I support businesses across many industries on Microsoft 365, Entra ID, Exchange Online and Teams Phone, alongside on-premises servers and networks, and work to SLAs. Clients regularly mention me by name in reviews and ticket feedback.

I like getting to the root of a problem and explaining the fix in plain English. I hold MS-900 and I'm working towards Microsoft 365 Administrator (MS-102).

KEY ACHIEVEMENTS

- **Stopped a live brute-force attack** on a client network by finding and closing an exposed Remote Desktop port (3389), preventing a security breach.
- **Fixed a recurring server crash** (blue screen) by analysing crash dump files, tracing it to conflicting drivers and applying a permanent fix, ending the downtime.
- **Agreed maintenance and backup windows with clients** so security patches and updates were applied with no disruption to their business.
- **Generated 24 major sales orders and over £11,000 in quarterly revenue** at ID Card Centre by developing a widely compatible technology card with card-reader configuration software.
- **Delivered a bespoke card-encoding solution for a county council**, working with its IT department to scope, build and deploy it to strict compliance requirements.

EXPERIENCE

Tier 2 IT Support Engineer Apr 2023 – Present

PCS Business Systems · Managed service provider · Remote

Promoted in 2025 from **RMM Analyst** (Apr 2023 – 2025)

- Began in the remote monitoring and management (RMM) team, keeping client devices, software and networks healthy remotely, with a focus on patch management.
- Manage, prioritise and log 1st and 2nd-line incidents and service requests in the PSA ticketing system, resolving them within SLA.
- Administer Microsoft 365 and Entra ID: user accounts, security groups, MFA and Conditional Access policies, plus Exchange Online mailboxes.
- Administer Microsoft Teams and Teams Phone, SharePoint, and on-premises and cloud business applications.
- Support on-premises infrastructure alongside cloud environments: Windows Server, local servers, networking (TCP/IP, DHCP), printers and legacy client systems.
- Manage endpoint security and patching with endpoint detection and response (EDR) and antivirus platforms, using RMM tools to monitor alerts and keep devices patched.
- Run client backups and restores.
- Work with third-party suppliers and hardware vendors to resolve application errors, software faults and warranty claims.
- Use PowerShell to investigate issues and speed up routine admin tasks.

Support Technician

Jul 2019 – Apr 2023

ID Card Centre · Identity and access control products

- Provided IT troubleshooting, hardware maintenance and technical support for office staff and external customers.
- Administered the company's WordPress intranet, managing user access and keeping technical documentation up to date.
- Configured, maintained and repaired rental hardware and software, building custom software and hardware packages for customers.
- Gave customers technical guidance and walkthroughs for bespoke card-printing software and card-encoding hardware.

SKILLS

Microsoft 365 & identity	Entra ID, Conditional Access, MFA, Exchange Online, SharePoint, Teams & Teams Phone, Purview, Intune, Active Directory, Group Policy
Infrastructure & networks	Windows Server, on-premises and hybrid environments, TCP/IP, DHCP, printer management
